

## **Anapharm Europe acquires a new high sensitivity equipment ABSCIEX QTRAP 5500**

Barcelona, December 1, 2012

As part of its efforts to continue to support drug development of women health and inhaler products, Anapharm Europe has purchased and validated a new equipment targeted to meet the requirements to validate bioanalytical methods with Limits of Quantification (LOQ) in the low pg/mL level.

The AB SCIEX QTRAP 5500 increases our capabilities for the determination of extremely low concentration of compounds such as Fluticasone, Salmeterol, Budesonide, Formoterol, Tiotropium, Ethinyl Estradiol, Paricalcitol, etc. in biological fluids.

### **About Anapharm Europe**

Over the past few years Anapharm Europe has established itself as a world class provider of bioanalytical services to international Sponsors with its strategically located, GLP-certified and GCP-compliant laboratory in Barcelona. With a wide experience and a successful regulatory history, Anapharm Europe has become a stable analytical partner for its clients. Anapharm Europe's main strengths include its strong expertise for method development and extensive portfolio of validated analytical methods, its high throughput capacity, as well as its top quality performance to deliver results within rigorous timelines at competitive prices.
